Ch. 17 Introduction - Anatomy and Physiology | OpenStax

Every human being, tissues, human body parts and the organ systems are made up of cells- the fundamental unit of life. Anatomy is the science of understanding the structure and the parts of living organisms. Physiology, on the other hand, deals with the internal mechanisms and the processes that work towards sustaining life.

Human Body - Anatomy and Physiology of Human Body

Types of Hormones. The hormones of the human body can be structurally divided into three major groups: amino acid derivatives (amines), peptides, and steroids (Figure 17.2.1). These chemical groups affect a hormone's distribution, the type of receptors it binds to, and other aspects of its function..

17.2 Hormones - Anatomy & Physiology

Shared Structures. Different types of blood vessels vary slightly in their structures, but they share the same general features. Arteries and arterioles have thicker walls than veins and venules
