

**Complex Analysis Spring 2001 Homework Iii Solutions**

Thank you very much for reading **complex analysis spring 2001 homework Iii solutions**. Maybe you have knowledge that, people have search hundreds times for their chosen novels like this complex analysis spring 2001 homework Iii solutions, but end up in infectious downloads. Rather than enjoying a good book with a cup of coffee in the afternoon, instead they cope with some malicious bugs inside their computer.

complex analysis spring 2001 homework Iii solutions is available in our digital library an online access to it is set as public so you can download it instantly. Our books collection saves in multiple countries, allowing you to get the most less latency time to download any of our books like this one. Kindly say, the complex analysis spring 2001 homework Iii solutions is universally compatible with any devices to read

OnlineProgrammingBooks feature information on free computer books, online books, eBooks and sample chapters of Computer Science, Marketing, Math, Information Technology, Science, Business, Physics and Internet. These books are provided by authors and publishers. It is a simple website with a well-arranged layout and tons of categories to choose from.

**Complex Analysis Spring 2001 Homework**  
Complex Analysis Spring 2001 Homework VI Due Friday June 1 1. Conway, chapter 5, section 1, problem 1 b,h,i,j. Determine the nature of the isolated singularity at  $z = 0$  of the following functions. If the function has a pole, find the singular part, for an essential singularity find the image of a small annulus. (b)  $f(z) = \cos z$

**Complex Analysis Spring 2001 Homework VI**  
Complex Analysis Spring 2001 Homework V Solutions 1. Conway, chapter 4, section 5, problem 7. Let  $\Re \gamma(t) = 1 + e^{it}$  for  $0 \leq t \leq 2\pi$ . Find  $\int \gamma(z-1) dz$  for all positive integers  $n$ . By Corollary 5.8, this is  $2\pi i (n-1)!$  times the  $n-1$ st derivative of  $f(z) = z^n$  evaluated at  $z = 1$ . The  $n-1$ st derivative of  $z^n$  is  $n!$  and so the result is  $2\pi i n!$ .

**Complex Analysis Spring 2001 Homework V Solutions**  
Complex Analysis Spring 2001 Homework II Solutions 1. With  $n \geq 2$  defined to be the least positive zero of  $\cos t$ , we established in class Wednesday that  $t \rightarrow e^{it}$  was onto the first quadrant of the unit circle in  $\mathbb{C}$ . Use proven properties of the complex exponential to prove that  $\cos(n-t) = -\cos t$ ,  $\cos(n+t) = -\cos t$ .

**Complex Analysis Spring 2001 Homework II Solutions**  
Complex Analysis Spring 2001 Homework III Solutions 1. Conway, chapter 3, section 3, problem 8 If  $Tz = az + b$ ,  $c \neq d$  show that  $T(\mathbb{R}^*) = \mathbb{R}^*$  if and only if  $a, b, c, d$  can be chosen to be real numbers. It is clear that if  $a, b, c, d$  are real, then  $T$  maps the extended real axis to the extended real axis.

**Complex Analysis Spring 2001 Homework III Solutions**  
Complex Analysis Spring 2001 Homework VII Due Friday June 8 1. Conway, chapter 5, section 1, problem 1 b, d. 2. Conway, Chapter 5, section 2, problem 2 d, g. 3. Conway, chapter 5, section 2, problem 6. 4. Conway, chapter 5, section 2, problem 13. 5. Compute  $\int_0^{2\pi} \frac{1}{3+2e^{ix}} dx$  using the residue calculus. (You may optionally use a change of variable first.) 6. Show that

**Complex Analysis Spring 2001 Homework VII**  
Complex Analysis Spring 2001 Homework VI Due Friday June 1 1. Conway, chapter 5, section 1, problem 1 b,h,i,j. Determine the nature of the isolated singularity at  $z = 0$  of the following functions. If the function has a pole, find the singular part, for an essential singularity find the image of a small annulus.
