Fortunately, any home theater amplifier designed for a 7.1 channel system should also be able to handle sound appropriate to that setup. For 7.1 or more channel systems, you should have a fairly large theater space. While they work in smaller rooms, you won't be able to really experience the sound in the dynamic range it was designed to play.

6 Best Home Theater Amplifiers - 3D Insider

When driving all five channels on 8 ohm speakers, we get 120 watts per channel. When driving two speakers only, you can get 170 watts per channel correspondingly.
