McGraw-Hill Connect Answers (All Subjects) - Answer Addicts

Soils are independent natural bodies, each with a unique morphology resulting from a particular combination of climate, living plants and animals inhabiting it, parent rock materials, relief, groundwaters, and age. Soils support plants (Fig. 1), occupy large portions of the Earth's surface, and have shape, area, breadth, width, and depth.

Soil - AccessScience from McGraw-Hill Education

Weathering processes create sediments (primarily mud and sand) and soil. Sedimentary rocks, which form from sediments, are discussed in chapter 6. In a general sense, weathering prepares rocks for erosion and is a fundamental part of the rock cycle, transforming rocks into the raw material that eventually becomes sedimentary rocks.
