Oxygen (O_2) gas has the same chemical properties as liquid oxygen. The liquid state is colder and denser (less energy), but the molecules are the same. Water (H_2O) is another example. A water molecule is made up of two hydrogen (H) atoms and one oxygen (O) atom.

Chem4Kids.com: Matter: Definition and Overview

Germanium is widely distributed in nature but is too reactive to occur free. Primary minerals include argyrodite (from which it was first isolated), germanite, renierite, and canfieldite, all of them rare; only germanite and renierite have been used as commercial sources for the element. Trace quantities of germanium are found in certain zinc blends, in sulfidic ores of copper and arsenic ...

In this post, the properties of a binary tree are discussed. 1) The maximum number of nodes at level 'l' of a binary tree is 2^l . Here level is the number of nodes on the path from the root to the node (including root and node). Level of the root is 0. This can be proved by induction. For root, $l = 0$, number of nodes = $2^0 = 1$
