Learning Python — The Hitchhiker's Guide to Python
The one liner doesn't work because, in Python, assignment (fruit = isBig(y)) is a statement, not an expression.In C, C++, Perl, and countless other languages it is an expression, and you can put it in an if or a while or whatever you like, but not in Python, because the creators of Python thought that this was too easily misused (or abused) to write "clever" code (like you're trying to).

python - How to assign a variable in an IF condition, and ...
Python поддерживает динамическую типизацию, то есть тип переменной определяется только во время исполнения.Поэтому вместо «присваивания значения переменной» лучше говорить о «связывании значения с некоторым именем».
