In mathematics, a partial differential equation (PDE) is an equation which imposes relations between the various partial derivatives of a multivariable function.. The function is often thought of as an "unknown" to be solved for, similarly to how x is thought of as an unknown number, to be solved for, in an algebraic equation like $x^2 - 3x + 2 = 0$

Partial differential equation - Wikipedia

(ii) A solution obtained by giving particular values to the arbitrary constants in a complete integral is called a particular integral (or) particular solution. (iii) A solution of a p.d.e which contains the maximum possible number of arbitrary functions is called a general integral (or) general solution. This is of the form $F(p,q) = 0$.
